

The Core-a-sol is a waterproof PVC cover to protect light and sound equipment at a festival from rain and beer showers. The cover is simply hung up in the [scaffolding structure](#) with four lashing straps and then forms a 'tent' with a floor space of 1.90 x 1.90 metres. At the front the cover is 2.5 metres high and at the back 2 metres high. The front flap can be zipped open and rolled up.

- Protection cover for technical equipment
- Waterproof
- Simple and ready to use
